CISC 275 Lab: Animation

Non-graded portions

Download Animation.java from the webpage and get it running. You will also need to download orc_forward_southeast.png and create the correct directory structure for the file (see code). You may work with others to get it working.

Ultimately you will need the other orc images (provided in the .zip).

Graded Exercise – On your own or in pairs

Modify Animation.java:

- See the three code sections marked TODO. Read the comments.
- Keep orc from walking off screen
- Make orc bounce off the edges. The orc will then travel in a new direction and you will need to use different images for the new direction. Use at least four different directions. Only read each .png file once (why?).

See the TODO notes in the source file for suggestions.
Submit your modified Animation.java to Sakai.
